

# Simple Floor Care Systems: Pacific's Proven Process

case study  
advertorial

Have you ever looked at your floors and rated them from 1 to 10? All great-looking floors begin with an honest evaluation and starting point. People generally have mixed opinions on a floor's appearance, but they all agree that two things are necessary: clean and shiny. Once you have determined where you are today and where you want to be, a program utilizing a variety of untested products systematically for the first time may provide unacceptable results. Pacific's PAC Chemical Systems removes that uncertainty with a proven process, measurable labor reductions, and the ease of ongoing maintenance.

*Clean and shiny for 6 months using only PAC Chemical Systems.  
NO BURNISHING!*

## Great Looking Floors Require Additional Labor—Or Do They?

First impressions are lasting perceptions. People look at the floors before anything else when they walk into a facility. The overall cleanliness of a facility is scrutinized by the condition of the floors. The single biggest issue plaguing the cleaning industry today is labor. So how do you keep your floors looking great? The key prescription for good-looking floors is not the amount of time needed to get results, but the results you get by reducing labor. No one cares how you got there, they just want to see a clean, shiny floor. PAC Chemical Systems provides you with a simple results-based system.

PAC Chemical Systems will keep floors in pristine condition. Floor care systems on the market today reduce labor but fall short of eliminating a cleaning process, PAC reduces labor dramatically by eliminating a "burnishing" process. Incorporating this system into your daily cleaning regiment protects your clean and shiny floors.

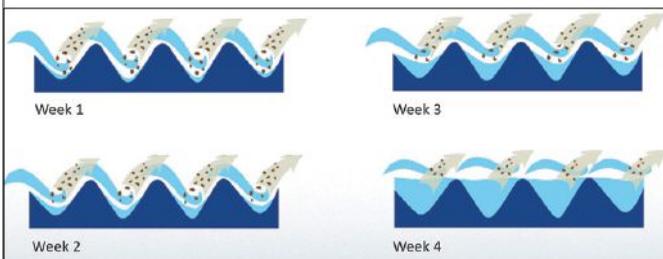

If your floors require topical coatings, how would you like to suspend scrub and re-coats or strip-outs? On average, customers utilizing the PAC System experience a 12- to 18-month savings pushing out these labor-intensive tasks.

## How Does It Work?

PAC's unique bio-based chemicals lift and suspend soils, leaving microscopic particles that fill scratches in the floor to create a durable, polished and protected surface. Long-lasting pads hold and press the chemical into the floor surface to hone, polish, and clean. Paired with a Pacific auto scrubber, you'll experience best-in-class down pressure and pad rpm to maximize effectiveness while reducing the time to achieve desired results.

## PAC Chemical Systems Program Benefits

- No burnishing, capital expense elimination—labor/chemical savings
- Suspending scrub and re-coats and strip-outs—labor/chemical savings
- Ease of implementation and training—the operator incorporates the system into their daily cleaning routine

*Fills scratches to create a durable, polished and protected surface.*
